The application has been amended as requested in the communication filed April 26, 2004. Accordingly, claims 1-62 have been canceled, and new claims 63-82 have been entered.

Applicant's election without traverse of Group 74, corresponding to new claims 63-82, in the reply filed on April 26, 2004 is acknowledged.

Claims 63-82 are pending under consideration.

In view of the papers filed July 30, 2004, the inventorship in this nonprovisional application has been changed by the deletion of William D. Hitz and Edgar B. Cahoon as co-inventor. The remaining inventors for the instant application are Rebecca E. Cahoon, Anthony J. Kenney, and Kevin G. Ripp.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Maria Restrepo-Hartwig on August 4, 2004.

The application has been amended as follows:

- Claim 63. An isolated polynucleotide comprising:
- (a) a nucleotide sequence encoding a polypeptide having lysophosphatidic acid acyltransferase (LPAAT) activity, wherein the polypeptide has an amino acid sequence of at least 95% 80% sequence identity, based on the Clustal V method of alignment, when compared to SEQ ID NO:56, or
 - (b) a full complement of the nucleotide sequence of (a).

Cancel claims 64-66 and 77-79.

- Claim 76. An isolated polypeptide having LPAAT activity, wherein the polypeptide has an amino acid sequence of at least 95% 80% sequence identity, based on the Clustal V method of alignment, when compared to SEQ ID NO:56.
- Claim 81. A method for isolating a polypeptide having LPAAT activity comprising isolating the polypeptide from a cell or culture medium of a ~~the~~ cell, wherein the cell comprises a recombinant DNA construct comprising the polynucleotide of Claim 63 operably linked

to at least one regulatory sequence, and expresses the polypeptide encoded by said polynucleotide.

Claim 82. A method of increasing altering the level of expression of an LPAAT in a host cell comprising: (a) transforming a host cell with the recombinant DNA construct of Claim 70; and (b) growing the transformed host cell under conditions that are suitable for expression of the recombinant DNA construct, and thereby increase the level of LPAAT in said host cell relative to that of wild-type. ~~wherein expression of the recombinant DNA construct results in production of altered levels of oil content in the seed, stem, and leaf in the transformed host cell.~~

Claims 63, 67-76, and 80-82 are allowed.

The following is an examiner's statement of reasons for allowance: The application discloses the nucleic acid of SEQ ID NO: 55 encoding Lysophosphatidic acid acyltransferase from soybean. They have enabled the nucleic acid use in transforming a host plant cell in order to increase the oil content in the host cell relative to the wild-type cell. Both the nucleic and amino acid sequences are free of prior art. Thus, the claims are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nashaat T. Nashed, Ph. D. whose telephone number is 571-272-0934. The examiner can normally be reached on MTTF.
